VIEW SYSTEMS INC. REBUILDS FACILITIES CONTROL MANAGEMENT DIVISION

Baltimore, MD. January 27, 2009 – **View Systems, Inc.** (OTCBB: **VSYM.OB**), a leading security solutions provider, announced today that it has expanded its network management practice and is rebuilding the design, construction and facilities control management unit that the firm was originally started on.

View Systems was originally formed around the technology of transferring data over secure networks. Over time, however, the company began to focus more on the design, manufacturing and promotion of security and high definition video products including the cutting-edge concealed weapons detection system, ViewScan and the VFR/MMV Hazmat Cam for first responders. In response to a plethora of recent requests from T-Corps, View's affiliate partner company, View has brought the network management and design division back into full swing.

America's largest communications companies are racing to get a fiber network into every building and residence in the United States to compete with the growing need for integrated communication technologies. The convergence of internet service, cable television, IP phone service and safety/security systems monitoring is explosively growing to accommodate the volume of data and video transmission and demand for real time speed. The replacement of existing communications networks with a fiber network is the focus of the next decade.

Gunther Than, CEO of View Systems, states, "One of our founding practices was the design and construction of secure fiber transmission networks to handle our advanced video technology. There is, indeed, a large target market for fiber integration technology. Various commercial and residential consumers are looking for experienced companies to manage the evolving use of fiber networks that replace the aging copper and coax infrastructure. With our background and experience, we believe that the restoration of this section of the business will prove to be profitable."

About View Systems, Inc:

View Systems, Inc. manufactures and installs weapons detection identification systems, video management platforms and communication networks targeted towards correctional facilities, schools, courthouses, government agencies, event and sports venues, the military and commercial businesses.
